Integral Solutions for the CNG Industry.

SMC-1103G Protection Cabinet for presentation units SMC-1103 3/4"

Protects the Display Board from shocks, humidity and dust, guaranteeing the proper functioning of the unit during the entire working period without technical problems. Solves the maintenance problems of already installed display units, victims of galvanic corrosion due to lack of adequate protection of the environment.

It guarantees an IP55 level of tightness thanks to the high-quality silicone sealing gaskets housed in the front and in the data connector of the Display. The base is made of a very tough plastic material resistant to impact, which guarantees adequate protection of the unit against shocks.

The Front features two-color screen printing with standard indications of \$ and m³ for any CNG dispenser.

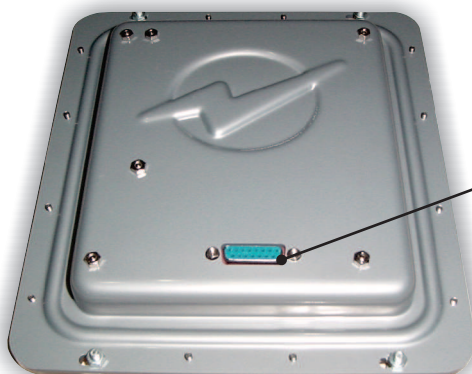

As an option, the cabinet can be delivered without screen printing to customize the front according to the customer's need.

Technical Features

- *Thermoformed ABS Base, Metallic Gray.*
- *Acrylic front 3mm thick with screen printing standard for any dispenser, in two colors.*
- *Tightness level: IP55 according to IEC-60529.*
